

1 Apache::Include - Utilities for mod_perl/mod_include integration

1.1 Synopsis

```
<!--#perl sub="Apache::Include" arg="/perl/ssi.pl" -->
```

1.2 Description

The `Apache::Include` module provides a handler, making it simple to include `Apache::Registry` scripts with the `mod_include perl` directive.

`Apache::Registry` scripts can also be used in `mod_include` parsed documents using 'virtual include'.

1.3 Methods

- **Apache::Include->virtual(\$uri)**

The `virtual` method may be called to include the output of a given uri in your Perl scripts. Example:

```
use Apache::Include ();

print "Content-type: text/html\n\n";

print "before include\n";

my $uri = "/perl/env.pl";

Apache::Include->virtual($uri);

print "after include\n";
```

1.4 See Also

`perl`, `mod_perl`, `mod_include`

1.5 Maintainers

Maintainer is the person(s) you should contact with updates, corrections and patches.
