

# 1 Software Bundles

There are several other Perl modules that you might wish to have installed, to take full advantage of `mod_perl` functionality. Provided you have Andreas König's CPAN.pm module, simply run:

```
cpan> install Bundle::Apache
```

This will fetch and install `mod_perl` and related packages for you all at once. Otherwise, once you've installed `mod_perl` see the listing by running

```
% perldoc Bundle::Apache
```

See also the source and the binary distributions.

**Table of Contents:**
